## Abstracts

Credit risk rating software is a specialized class of enterprise technology designed to systematically evaluate and quantify the likelihood that a borrower or counterparty will default on its financial obligations. These solutions integrate statistical models, machine learning algorithms, and rule-based engines to process vast datasets—including financial statements, payment histories, macroeconomic indicators, and behavioral data—to generate consistent, objective risk scores or ratings. The software enables financial institutions, corporations, and fintech firms to automate underwriting decisions, monitor portfolio risk, ensure regulatory compliance (such as Basel III, IFRS 9, or CECL), and optimize capital allocation. By replacing or augmenting manual assessment processes, it enhances accuracy, scalability, and efficiency in credit decision-making across lending, investment, and trading activities.

The global Credit Risk Rating Software market size was estimated at USD 1200.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
