## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Crew Transfer Vessel (CTV) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The global production of crew transfer vessels (CTVs) is expected to be between 300 and 500 in 2024, with an average global market price of US\$5.5 million to US\$8 million per vessel. Crew Transfer Vessel (CTV) is a vessel specifically designed for the transportation of crew members between offshore facilities or platforms, such as oil rigs or wind turbines, and the shore. It provides a safe and efficient means of transferring personnel to and from these locations, often in remote or challenging environments. CTVs are typically equipped with necessary safety features and designed to accommodate the unique challenges of offshore operations, including rough seas, high winds, and limited space. They are an integral part of the maritime industry, ensuring the safe transportation of personnel in support of offshore energy and other related operations. The global crew transfer vessel (CTV) market is rapidly developing. Europe, a core market, boasts approximately 400 vessels in operation. The United States, leveraging the Jones Act to boost domestic production capacity, will add 23 vessels in 2024, with annual demand expected to reach 30-50. Asia (China and South Korea) is penetrating the mid- and low-end markets with price-performance advantages of \$4 million to \$6 million per vessel. On a technical level, over 60% of new vessels use hybrid or LNG fuel to meet emission reduction requirements. Hydrogen-fueled CTVs are entering the pilot phase. Meanwhile, intelligent systems such as IoT monitoring and automatic navigation are becoming increasingly common, driving prices for high-end models to \$8 million to \$12 million. Market dynamics are trending towards "greening + larger vessels," with vessel sizes moving towards 120-150 feet to accommodate deep-sea wind farms. In the competitive landscape, Europe leads in

technology, the United States drives policy, and Asia dominates on cost. Green and smart technologies will become key competitive advantages in the future.

The global Crew Transfer Vessel (CTV) market size was estimated at USD 2851.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
