Cross docking is a logistics strategy in which products from suppliers or manufacturing plants are distributed directly to customers or retail chains with minimal to no storage time in between. The process involves unloading materials from an inbound transport vehicle and loading them directly onto outbound vehicles, with only brief staging in a docking terminal. This method aims to eliminate the costs and time associated with warehousing, reduce inventory holding expenses, and accelerate order fulfillment, making it particularly advantageous for perishable goods, high-turnover items, and just-in-time supply chains.
