## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cross-linked Dextran Resin competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Cross-linked dextran resins are polymeric adsorption materials based on the natural polysaccharide dextran, chemically cross-linked to form a three-dimensional network structure. They are commonly used in chromatographic separations, protein purification, and sustained-release drugs. These resins exhibit excellent biocompatibility, stability, and selective adsorption properties, enabling efficient separation and purification in aqueous systems. They are widely used in biopharmaceutical and biochemical research. Sales volume in 2024 is expected to be 32,000 kg, with an average price of US\$3,450 per kg. The upstream production of cross-linked dextran resins primarily includes natural dextran raw materials, cross-linking agents (such as epoxides or other cross-linking monomers), and organic solvents and additives used in the synthesis process. These raw materials primarily come from industries such as biofermentation and fine chemicals, and their quality and stability directly impact the resin's physical structure and adsorption properties. Downstream applications include biopharmaceuticals, food analysis, environmental testing, and research institutions, primarily for protein separation and purification, enzyme immobilization, and drug delivery. With the development of the biopharmaceutical industry and the increasing demand for high-efficiency separation materials, the application of this product in downstream markets continues to expand, placing higher demands on performance, batch stability, and biosafety.

The global Cross-linked Dextran Resin market size was estimated at USD 110.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.00%

during the forecast period.
