## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Crosslink Agent BIPB competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Crosslink Agent BIPB production reached approximately 3,7069 tons, with an average global market price of around US\$9000 per ton. Crosslink agent BIPB (Di(tert-butylperoxyisopropyl)benzene) is a high-temperature organic peroxide used to induce crosslinking in polyolefins. Upon thermal decomposition it generates free radicals that initiate three-dimensional network formation between polymer chains, improving thermal resistance, mechanical strength and environmental stress crack resistance. BIPB features a relatively high and controllable decomposition profile, good storage stability and typically lower volatile by-products and residues, making it suitable for applications such as cable insulation, piping, foam production and thermoplastic elastomers where high processing temperatures and clean end-product profiles are required.

The global Crosslink Agent BIPB market size was estimated at USD 334.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Crosslink Agent BIPB market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
