Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Crosslinked Modified Polyethylene competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global crosslinked modified polyethylene production reached approximately 2,946 K tons, with an average global market price of around US\$ 1,895/ton. Crosslinked modified polyethylene refers to a thermoplastic material in which the polyethylene (PE) polymer chains are chemically or physically bonded into a three-dimensional network.
