## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Crosslinking Agent TAIC competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Crosslinking Agent TAIC production reached approximately 27 kilotons, with an average global market price of around US\$4,200 per ton. The crosslinking agent TAIC refers to triallyl isocyanurate. TAIC is a light yellow liquid or crystal at room temperature with a melting point of 17-27°C and a specific gravity of 1.155. TAIC is insoluble in water and soluble in aromatics, ethanol, acetone and halogenated hydrocarbons. TAIC is a triazine ring multifunctional olefin monomer, which can be self-polymerized or homopolymerized and cross-linked with various olefins, and can undergo various characteristic reactions of aliphatic olefins. TAIC is stable at room temperature and can be stored stably for a long time. TAIC crosslinker market outlook is broadly positive, driven by demand from rubber, plastics, electronics and automotive sectors for improved thermal stability, aging resistance and mechanical performance; as end products trend toward higher heat resistance, wear performance and lightweighting, TAIC's role as a multifunctional co-agent continues to expand, and two technological trends stand out: formulators are tailoring TAIC grades and delivery forms (solid vs. liquid, dispersible carriers) to improve compatibility, dispersion and processing stability across silicone elastomers, polyolefins and engineering polymers, and suppliers are developing lower-migration, easier-to-handle variants to meet processing safety and regulatory expectations, while radiation and peroxide crosslinking routes using TAIC to increase crosslink density and enhance mechanical properties are increasingly validated in both academic and industrial contexts; from an industry perspective, market dynamics will be influenced by supply concentration, raw-material volatility and tightening environmental regulations, yet new application pockets such as high-

performance composites, specialty films and functional coatings offer premium growth opportunities, so priorities include monitoring downstream technology shifts and compliance trends and investing in differentiated formulations and traceable quality control to capture mid-to-high-end market segments.

The global Crosslinking Agent TAIC market size was estimated at USD 113.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
