Abstracts

The biggest difference between the demolition machine and the ordinary excavator is the difference in the front-end working device, that is, the working purpose is different: the big and small arms of the ordinary excavator are generally two-stage, and the front end is a bucket, whose main function is to carry out digging and loading operations; The big and small arms of the demolition machine are generally three-stage (commonly known as the demolition and extension arm), and the front end is a hydraulic shear or a breaking hammer, whose main function is to carry out the demolition of buildings and other buildings. According to research data from our company's "Engineering Machinery Research Center", the total sales revenue of the top 50 global engineering machinery manufacturers reached 230 billion US dollars in 2022. Asian companies have an absolute advantage, accounting for 50% of sales revenue, followed by Europe, accounting for 26% of sales revenue, and North America, accounting for 23%. The top 50 global host manufacturing companies, Construction Machinery, sold approximately 1.2 million units of construction machinery equipment in 2021, with sales increasing by 9%. China is currently the world's largest factory machinery market, with construction machinery enterprises accounting for 24% of total sales in 2022, making it the country with the highest proportion. According to data from the China Machinery Industry Federation, the operating revenue of the construction machinery industry decreased by more than 12% in 2022. The operating revenue of the Chinese construction machinery industry in 2022 was 797.7 billion yuan, and China's annual export value reached 44.3 billion US dollars, with a net increase in export value of 23.3 billion US dollars in two years.
