Abstracts

Cryo and freezer boxes are standardized, durable plastic containers designed for the secure storage and organization of biological samples, reagents, and other temperature-sensitive materials in laboratory and clinical settings. Typically manufactured from materials such as polypropylene or polycarbonate that withstand ultra-low temperatures (down to -196°C for cryogenic use), these boxes feature modular, grid-like dividers to hold vials, tubes, or microplates in fixed positions, minimizing cross-contamination and physical damage. They are often stackable, compatible with automated retrieval systems, and may include features like barcode labels, color-coding, and corrosion resistance to ensure sample integrity, traceability, and longevity in environments such as biobanks, pharmaceutical research facilities, and hospitals.
