## Abstracts

Low temperature ethylene transports pressurized liquids at temperatures below 50 ° F. Colorless, sweet and smelling. Boiling liquids produce less vapor than air. Easily ignited. Non toxic but a simple asphyxiating agent. After prolonged exposure to fire or high temperature, the container may crack violently and explode. Used as anesthetics, refrigerants and in the manufacture of other chemicals. Low-temperature ethylene refers to ethylene prepared at low temperatures, usually below minus 100 degrees Celsius. Ethylene is a hydrocarbon with the chemical formula C<sub>2</sub>H<sub>4</sub>, which is a colorless and toxic gas, and is a colorless and pungent odor gas at room temperature and pressure. Low-temperature ethylene is commonly used in special chemical processes and laboratory studies. The properties of ethylene may change at low temperatures, so the use of low-temperature ethylene is required in specific experimental and industrial processes.

The global Cryogenic Ethylene market size was estimated at USD 555.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
