Abstracts

Cryogenic gas products refer to gases that are liquefied and stored at extremely low temperatures, typically below -150°C (-238°F), which includes industrial and medical gases such as liquid nitrogen, liquid oxygen, liquid argon, and liquid helium. These products are essential across a wide range of sectors, including healthcare (for medical imaging, cryosurgery, and biological sample preservation), metal fabrication (for shielding and cooling in welding and cutting), electronics (in semiconductor manufacturing), energy (for LNG and aerospace propulsion), and food processing (for quick freezing and packaging). The cryogenic process significantly reduces volume, enabling efficient storage and transportation, while demanding specialized infrastructure like vacuum-insulated containers and cryogenic tanks to maintain ultra-low temperatures and ensure safety during handling.

The global Cryogenic Gas Products market size was estimated at USD 3125.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
