Report Overview

A probe station is an interface tool to measure the electrical characteristics of your microelectronic device. For example, if you are unable to see the inputs and outputs of your DUT precisely with the naked eye, a probe station is what you need to perform measurements, whether it be a wafer, glass, MEMS etc. However, the station requires a combination of a microscope and micropositioners to facilitate the experiment. When integrated, users can accurately make contact to their devices with probes and measure with electronic meters to see your results.
