Abstracts

Cryogenic storage dewars are specialized vacuum-insulated containers designed for the long-term storage and transportation of cryogenic liquids, such as liquid nitrogen, liquid oxygen, liquid argon, and liquid helium, at extremely low temperatures?typically below -150°C. These vessels feature a double-walled construction with an evacuated space between the walls to minimize heat transfer, preserving the cryogenic state of the contents for extended periods. They are essential in scientific research, healthcare (for storing biological samples, vaccines, and reproductive cells), industrial gas supply, and aerospace applications, where maintaining precise, ultra-low temperatures is critical. Modern dewars often incorporate advanced materials, such as high-performance multilayer insulation, and may include features like pressure relief valves, level indicators, and customizable neck tubes to optimize performance, safety, and usability across diverse operational environments.

The global Cryogenic Storage Dewars market size was estimated at USD 120.35 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
