Report Overview

Cryopreservation is the process of preserving cells or complete tissues that are susceptible to damage caused by chemical reactivity and harmful enzymatic activity. This process is accomplished by keeping these materials at sub-zero temperatures wherein the activity of chemicals and enzymes stops. This process is performed in an apparatus known as cryopreservation equipment. Cryopreservation equipment include drystore freezers, mechanical freezers, cryopreservation freezers, cryopreservation vials, incubators and stem cell research laboratory equipment. These equipment parts help in completing the process of cryopreservation by providing stable cryogenic storage for biological specimens. The ultra low temperatures attained using these equipment is maintained by the use of certain amount of liquid nitrogen.
