## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on CSP Carrier Tape competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. CSP carrier tape is an important tool in semiconductor packaging and automated assembly processes. It is used to carry and protect the safety of the chip during transportation, storage and assembly. The carrier tape is usually made of plastic material with special grooves or holes embedded in it to hold the chip and ensures smooth gripping during machine automation. Chip-level packaging (CSP) is the latest generation of memory chip packaging technology, and its technical performance has been improved. Chip-level packaging (CSP) can make the ratio of chip area to package area exceed 1:1.14, which is quite close to the ideal situation of 1:1. The absolute size is only 32 square millimeters, about 1/3 of ordinary BGA, and only 1/6 of the area of ??TSOP memory chip. Compared to BGA packages, chip-level packages (CSPs) under the same space can triple the storage capacity.

The global CSP Carrier Tape market size was estimated at USD 231.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.70% during the forecast period.
