The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on CSP Molten Salt competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global CSP Molten Salt production reached approximately 2.34 million tons, with an average global market price of around US\$ 700 per ton. CSP molten salt refers to high-temperature liquid salts used for thermal energy storage and heat transfer in concentrating solar power (CSP) systems, particularly in tower and parabolic trough plants. Typical types include binary salts (a mixture of sodium nitrate and potassium nitrate) and ternary salts. These molten salts feature high specific heat capacity, low vapor pressure, and good thermal stability. During daytime, they absorb solar thermal energy and store it in insulated tanks, then release the heat at night to drive steam turbines for electricity generation. Molten salt is essential for enabling stable, dispatchable solar power.

The global CSP Molten Salt market size was estimated at USD 1638.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
