Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on CTP (Cell to Pack) Battery Pack competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. CTP, or Cell to PACK, is the direct integration of battery cells into battery packs, thus eliminating the intermediate module link. The battery cells are directly installed in the battery pack shell in an array, omitting the step of assembling the battery cells into modules. Through the CTP design, while ensuring the strength of the battery pack, accessories such as crossbeams, longitudinal beams and bolts are eliminated, and the space utilization rate inside the battery pack shell is increased from the original 40%-50% to 60%-80%. Compared with traditional battery packs, CTP battery packs have a 15%-20% higher volume utilization rate, a 40% reduction in the number of parts, and a 50% higher production efficiency. Once put into use, they will significantly reduce the manufacturing cost of power batteries. CTP battery pack technology is a highly integrated battery pack solution that improves the performance of battery packs by optimizing design and integration, providing new possibilities for electric vehicle range and cost optimization.

The global CTP (Cell to Pack) Battery Pack market size was estimated at USD 5355.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.90% during the forecast period.
