Abstracts

Cubic boron nitride (c-BN) films represent a synthetic superhard material composed of boron and nitrogen atoms arranged in a cubic crystal structure similar to diamond, exhibiting exceptional properties including high hardness (second only to diamond), outstanding thermal stability, chemical inertness (particularly against ferrous metals), and wide bandgap semiconducting characteristics. These films are typically deposited via physical or chemical vapor deposition techniques and serve specialized applications where diamond films are unsuitable due to chemical reactivity or electrical conductivity limitations.
