Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on CUF Resins competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global CUF resins production reached approximately 270 tons, with an average global market price of around US\$ 1,680/kg. CUF resins are highly filled epoxy (or epoxy-based) encapsulant systems engineered to be dispensed at the chip-substrate interface and drawn under the die by capillary action (or applied as no-flow / molded / wafer-level variants). They reduce thermal-mechanical stress on solder bumps/Cu pillars, improve drop and vibration reliability, and provide moisture/contaminant protection; typical formulations are an epoxy resin matrix loaded with inorganic fillers (silica, alumina, etc.) and tailored rheology, cure profile and coefficient-of-thermal-expansion (CTE). The downstream of CUF resins is mainly in the consumer electronics and automotive industries.

The global CUF Resins market size was estimated at USD 453.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global CUF Resins market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
