Report Overview

Cured-In-Place Pipe (CIPP) is an advanced trenchless technology used for rehabilitating existing pipelines without excavation. The process involves inserting a flexible liner, saturated with a thermosetting resin, into a damaged pipe. The liner is then cured using hot water, steam, or ultraviolet light, forming a solid, corrosion-resistant pipe within the original pipeline. CIPP is widely applied for repairing sewer, water, and industrial pipelines, offering a cost-effective, durable, and minimally disruptive alternative to traditional pipe replacement methods. Its advantages include reduced surface disruption, shorter project timelines, and enhanced environmental sustainability.

The global Cured-In-Place Pipe (CIPP) market size was estimated at USD XX million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of XX% during the forecast period.
