Report Overview

Current clamps, also known as clamp meters or current probes, are electrical testing devices designed to measure electric current without direct contact with conductors, utilizing a hinged jaw that clamps around a wire to detect magnetic fields generated by the current flow. These tools are widely used in industrial, commercial, and residential settings for troubleshooting, maintenance, and safety inspections, offering both AC and DC measurement capabilities depending on the model. The market for current clamps is driven by increasing demand for energy efficiency, the expansion of electrical infrastructure, and stringent safety regulations in industries such as manufacturing, utilities, and construction.
