Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Current Source Inverter (CSI) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.Current Source Inverter (CSI) is a power electronic device based on fully controlled power devices (such as IGBT, GTO). The DC side uses inductance as an energy storage element, making the input end present a high-impedance current source characteristic. CSI uses high-frequency pulse width modulation (PWM) technology to convert DC current into AC current output with controllable amplitude, frequency and phase. Its output current waveform is of high quality (such as THD <5%), low harmonic content, and has fast dynamic response capabilities. It is widely used in occasions that require high-precision current control, such as motor drive, grid interconnection and power quality management.

The global Current Source Inverter (CSI) market size was estimated at USD 918.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.70% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Current Source Inverter (CSI) market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
