Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Curved Saw Blade competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Curved Saw Blade production reached approximately 42.02 million units, with an average global market price of around US\$ 4.7 per unit. A curved saw blade is a cutting tool with teeth designed in continuous or segmented curved patterns (such as arc-shaped, wavy, or spiral configurations), typically made from high-speed steel (HSS), cemented carbide (e.g., tungsten carbide), or carbon steel. When driven by reciprocating or rotary motion, the curved tooth arrangement guides chips smoothly for easier removal, reduces cutting resistance along the kerf, and adapts to complex contour trajectories. It is widely used for non-linear cutting tasks in materials such as wood, plastic, metal, and composites, serving as a key tool for achieving precise curved, arc-shaped, or irregular cuts.

The global Curved Saw Blade market size was estimated at USD 198.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
