Abstracts

A Custody Transfer System is a critical process and set of equipment used to accurately measure, account for, and transfer ownership of goods—typically like oil, gas—between parties in a commercial transaction. The chief goal of a custody transfer system is to ensure measurements are as accurate as possible, as even the smallest discrepancies can translate to significant losses for the short-changed party, especially for high-value resources such as oil and gas. These systems generate detailed documentation for regulatory compliance, incorporate automation for real-time monitoring, and include provisions for assessing product quality, thereby ensuring safe and transparent transfer processes in various industries.

The global Custody Transfer System market size was estimated at USD 316.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
