Abstracts

Custom-made dental medical devices are patient-specific medical devices that are individually designed and manufactured on the basis of the patient's unique oral anatomical structure, pathological conditions, and functional as well as aesthetic needs. Using professional dental techniques and precise manufacturing processes, these devices are tailored to meet the therapeutic requirements of a single, identified patient. Typical examples include custom fixed and removable dentures, implant-borne superstructures, periodontal splints, orthodontic appliances and clear aligners, occlusal splints and sports mouthguards, anti-snoring devices, and surgical guides for implant or maxillofacial procedures. The supply chain for custom-made dental medical devices can be viewed in three tiers: Upstream materials and equipment – suppliers of dental biomaterials metal alloys, zirconia and glass-ceramic blocks, PMMA and thermoformed sheets, 3D-printing resins) and digital equipment such as intraoral scanners, CBCT, CAD/CAM milling systems and dental 3D printers, led by global players like Straumann, Envista, Dentsply Sirona, 3M, Ivoclar, Kulzer and regional manufacturers; Midstream OEMs and dental lab networks – implant and restorative OEMs together with large lab groups convert clinical prescriptions and digital data into patient-specific prostheses, clear aligners and surgical guides, forming the core value-creation and digital-scale layer. This tier typically exhibits mid- to high gross margins and strong economies of scale?Downstream providers – dental hospitals, clinics and DSOs bundle these custom devices with chairside services.

The global Custom Dental Medical Devices market size was estimated at USD 30521.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
