Report Overview

Custom gene synthesis services involve the artificial synthesis of DNA or RNA sequences based on specific customer requirements. These services are commonly used in various fields, including academic research, pharmaceuticals, biotechnology, and agriculture. Gene synthesis refers to chemically synthesizing a strand of DNA base-by-base. Unlike DNA replication that occurs in cells or by Polymerase Chain Reaction (PCR), gene synthesis does not require a template strand. Rather, gene synthesis involves the step-wise addition of nucleotides to a single-stranded molecule, which then serves as a template for creation of a complementary strand. Gene synthesis is the fundamental technology upon which the field of synthetic biology has been built.

The global Custom Gene Synthesis Service market size was estimated at USD 576 million in 2023 and is projected to reach USD 2259.43 million by 2032, exhibiting a CAGR of 16.40% during the forecast period.
