Abstracts

Custom metal shearing services are specialized manufacturing processes that involve cutting large sheets, plates, or strips of metal into custom shapes and sizes. Using high-precision machinery, custom shearing services allow manufacturers to produce parts and components tailored to specific design requirements. Metal shearing services are industrial processes that cut sheets or plates of metal into specific shapes and sizes. As a subset of stamping, shearing shapes or divides metal into parts through operations such as blanking and piercing. Unique among metalworking methods, shearing exclusively focuses on cutting without removing material. Shearing employs a die to exert shear force on metal, precisely cutting it into the required shape. This process capitalizes on the force between the press and the metal, essential for achieving the desired configuration.

The global Custom Metal Shearing Services market size was estimated at USD 1300.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
