Report Overview

A microgrid is an on-site energy system that supports your energy resilience by integrating several distributed energy technologies into a single controllable solution. It can operate by supplementing the utility grid in grid parallel mode, and it can function completely autonomously in island mode. With a custom microgrid installation, you not only have a back-up in case the grid fails, but you will enhance the way your energy functions within the grid for normal daily operation. Simultaneously delivering cost savings, resiliency, and sustainability, microgrids can reduce peak demand charges and lower your utility bill, selectively running the charging phase whenever the cheapest power is available from the grid or from onsite energy generation.
