Abstracts

The custom watertight bulkhead door is a door with watertightness on the watertight bulkhead. Commonly used are hinged watertight doors and sliding watertight doors. It is usually a metal door. The former has a light structure and is easy to open and close; the latter is used in places with limited water pressure and limited status. Hinged doors can be operated manually or hydraulically/electrically, while sliding doors are always hydraulic/electrically operated. Watertight doors minimise the risk of sinking by minimising the ingress of water during a grounding or collision or when the vessel suffers structural damage. Watertight closures are designed to withstand continuous immersion and are therefore located below the waterline in access to pipe tunnels, storerooms, bow thruster compartments and other mechanical spaces, or above the waterline in the form of pilot doors and bunker doors. All openings below the waterline must be watertight as they are to maintain the watertight integrity of the hull and can withstand water pressure from both sides. The increasing significance and importance of maritime surveillance through naval patrol vessels at sea has had a positive impact on the demand for watertight doors. Maritime tourism and coastal tourism have seen healthy growth. According to estimates published by the World Trade Organization, the number of tourists to Europe has increased by 6% per year. A large part of tourists (an average of 200 million tourists per year) are concentrated in the Mediterranean coastal areas. Tourists participate in maritime tourism. This trend has led to increased sales of marine vessels such as boats and cruise ships, thereby indirectly boosting the sales of watertight doors.

The global Custom Watertight Bulkhead Doors market size was estimated at USD 355.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
