## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Customized Optical Wafer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Customized Optical Wafer is a specialized type of semiconductor wafer that integrates precision optical structures, micro- and nano-optical components, or specific functional layers through advanced semiconductor fabrication processes. Unlike traditional electronic chips, it is specifically engineered to perform functions such as light path control, photoelectric conversion, or optical signal processing. In 2024, the average price of Customized Optical Wafers was \$185, with a production volume of approximately 973,000 units. Fused silica micro lens arrays (MLAs) are gaining traction in precision optics and photonics applications due to their exceptional thermal stability, high transmission in the UV to IR spectrum, and superior durability. These MLAs are essential components in optical communication systems, LiDAR, beam shaping, medical imaging, and semiconductor lithography. The demand is particularly strong in markets such as the United States, Germany, Japan, South Korea, and China, driven by advancements in 3D sensing, automotive electronics, and photonic integration.

The global Customized Optical Wafer market size was estimated at USD 180.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 21.00% during the forecast period.
