### Report Overview

The cutting balloon system is a device that organically combines conventional balloons with microsurgical blades, and is used for coronary interventional therapy. Three or four atherosclerotic incision knives (microsurgical blades) are installed longitudinally on the outer surface of the balloon. When the cutting balloon is expanded, the sharp blades are exposed, and the atherosclerotic plaque is cut longitudinally along the vessel wall Block and tube wall, reducing the annular pressure, can maximize the expansion of the target lesion with the minimum force and time. It has mild and regular damage to the coronary intima, and can prevent or reduce the incidence of acute vascular complications during operation and postoperative restenosis.
