Report Overview:

The turning inserts are such cutting tools that are used to machine different metals like steel, carbon, cast iron, and high-temperature alloys. They are indexable which means they can be rotated, flipped, exchanged with other insert without the need to disturb tool geometry. A CVD coating is a material applied to a surface by a method called chemical vapor deposition. Remains bonded in high stress environments and when the surface flexes due to high adhesion characteristics. Precursor gas can be optimized for wear resistance, high lubricity, corrosion resistance, fouling resistance, high purity, or chemical inertness.
