Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on CVD Precursor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. CVD precursors (chemical vapor deposition precursors) are gaseous or volatile liquid/solid compounds used to prepare thin film materials in the chemical vapor deposition (CVD) process. They form target materials on the substrate surface through thermal decomposition, oxidation, reduction and other reactions. Their selection directly affects the purity, uniformity and performance of the film. Common types include metal organic compounds (such as TEOS, TMA), halides (such as SiCl₄) and hydrides (such as SiH₄).

The global CVD Precursor market size was estimated at USD 962.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
