Abstracts

Cyanogen chloride is used in chemical synthesis (military poison gas), as a fumigant gas warning agent, as a tear gas, metal cleaning (in ore refining or synthetic rubber manufacture), electroplating, and photography. Because of its warning properties, cyanogen chloride was once widely employed as a pesticide. By heating silver tricyanomethanide in liquid cyanogen chloride, cyanogen chloride can be used to make tetracyanomethane and methane tetracarbonitrile. Cyanogen chloride is also used in the Lonza process, which produces ultra-pure malononitrile. Cyanogen chloride is frequently employed for fumigating ships and warehouses, as well as for mineral extraction. Instead of cyanogen bromide, cyanogen chloride was produced by an auto analyzer from chloramine-T and potassium cyanide. Cyanogen chloride is used in chemical synthesis (military poison gas), fumigation gas warning agents, tear gas, metal cleaning (ore refining or synthetic rubber manufacturing), electroplating, and photography. Due to its warning properties, cyanuric chloride was once widely used as a pesticide. By heating silver tricyanobyl methane in liquid cyano chloride, cyano chloride can be used to produce tetracyanomethane and methane tetranitrile. Cyanogen chloride is also used in the Lonza process for the production of ultra-pure malononitrile. Cyanuric chloride is frequently used in fumigation ships and warehouses, as well as in mineral extraction. Instead of cyanogen bromide, cyanogen chloride is produced from chloramine-T and potassium cyanide by an automated analyzer.

The global Cyanogen Chloride market size was estimated at USD 658.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
