Abstracts

The network range for enterprise training is a simulated network environment built based on virtualization technology. It provides a practical network security skills training platform for enterprise employees by reproducing real network architecture, system equipment, business processes and attack scenarios.

Analysis of market drivers

- Policy compliance and strategic needs**
Legal promotion: Governments of various countries have incorporated cybersecurity into national strategies. For example, China's "Cybersecurity Law" explicitly requires key industries to conduct regular attack and defense drills, which directly drives the demand for corporate range procurement.
Industry standards: Systems such as the 2.0 security protection system and ISO 27001 require companies to establish security training mechanisms, and ranges have become an essential tool for compliance.
- Growth in corporate security investment**
Expansion of attack surface: Digital transformation is accelerating (such as industrial Internet and Internet of Things deployment), corporate network exposure has surged, and the proportion of security budgets has increased to 10%-15% of total IT investment.
Talent gap: The global cybersecurity talent gap exceeds 3 million, and companies need to improve employee skills and reduce internal risks through range training.
- Technology integration and innovation**
AI empowerment: AI algorithms realize automatic generation of attack paths and intelligent recommendation of defense strategies. For example, IBM's AI range can simulate unknown threats.
Cloud trend: SaaS ranges (such as Yunke Anxin products) reduce deployment costs and support remote training and cross-regional collaboration.
Digital twin: Build a 1:1 replica of the industrial control system range (such as Heze Technology products) to improve the realism of the scene.
- Deepening of industry scenarios**
Industrial safety: The demand for industrial control ranges in industries such as electricity and energy has surged, simulating PLC attacks, SCADA system penetration and other scenarios.
Financial security: Banks and securities institutions need to practice phishing attacks, data leaks

and other scenarios, and the range integrates anti-fraud modules. Internet of Vehicles security: With the popularization of intelligent connected cars, car companies need to test CAN bus attacks, OTA upgrade vulnerabilities and other scenarios. 5. Ecological cooperation and market competition Industry-education integration: manufacturers cooperate with universities and training institutions to build an "training-certification-employment" ecological chain (such as Yongxin Zhicheng and universities jointly build laboratories). Service transformation: From product sales to the "range + service" model, providing customized scenario development, attack and defense competition operations and other value-added services. Price competition: The products in the mid- and low-end markets are highly homogenized, and some manufacturers use low-price strategies to seize small and medium-sized enterprise customers. Driven by policies, technologies, and needs, the network range market for corporate training is evolving from "scale" to "refinement". Leading companies consolidate their advantages through deep technology cultivation and ecological layout, while vertical companies focus on industry scenarios to achieve differentiated competition. In the future, with the integration of AI and cloud technology, the range will become a "training ground" and "testing ground" for corporate network security capabilities, and continue to promote industrial upgrading.

The global Cyber Range for Enterprise Training market size was estimated at USD 671.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.00% during the forecast period.
