Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ethylene Urea competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of ethylene urea reached 37,570 tons, with an average selling price of US\$6,741 per ton. Ethyleneurea also known as 2-imidazolidinone, ethylene urea, etc., is an important member of imidazole series compounds and is an efficient formaldehyde trapping agent. Excellent tear and wrinkle finish for everyday textiles. Due to its advantages of low toxicity, high polarity and high safety, 2-imidazolidinone and its derivatives have become important intermediates in the synthesis of medicines and pesticides, and are widely used in the synthesis of various antibiotics and pesticides. In addition, imidazolone compounds can also be added to metals as corrosion inhibitors to inhibit the corrosion of metals. Therefore, it has a broad market prospect, especially the high-purity 2-imidazolidinone and its derivatives have become the scarce fine chemicals. Currently, the mainstream process uses ethylenediamine and urea as raw materials to produce 2-imidazolium ketones through a one-step condensation-ring-closure reaction. The reaction conditions are mild, and the yield is high. Ethylenediamine accounts for approximately 55% of the variable cost, and urea for approximately 15%. Both are bulk chemicals, and their prices fluctuate with oil prices and agricultural seasons. In 2024, the average domestic price of ethylenediamine was approximately RMB 13,000/ton, and urea was RMB 2,500/ton. Besides raw materials, energy consumption (high-temperature amine vaporization and vacuum drying), environmental treatment (tail gas absorption, wastewater denitrification), and labor depreciation account for approximately 30% of the total cost. With increasingly stringent environmental regulations, the cyanide route has been phased out, and green continuous processes have become the direction for cost reduction. It is estimated that

large-scale production can control the total cash cost to within RMB 20,000/ton.

The global Ethylene Urea market size was estimated at USD 253.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
