Abstracts

Cyclohydrogen adhesives are a type of high-performance adhesives with cycloalkane hydrogenated resins or cycloalkane group-containing polymers as the main components. They have excellent weather resistance, heat resistance, oxidation resistance and transparency. Compared with traditional aromatic or non-hydrogenated resin adhesives, cyclohydrogen adhesives are widely used in optical materials, electronic packaging, medical dressings, automobile manufacturing and high-end adhesive products due to their low color, low odor and high stability. Its unique chemical structure allows it to remain stable in high temperature environments, while still having good flexibility and adhesion in low temperature environments, making it suitable for applications that require high optical transparency and long-term stability.

The global Cyclic Hydrogen Adhesive market size was estimated at USD 526.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
