## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cyclic Resin Line competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Global sales of cyclic resin lines will reach approximately 1,360 units in 2024, with an average price of approximately \$161,000 per unit and an overall gross profit margin of around 28%. A cyclic resin line is a continuous production system used for crack repair, reinforcement, and surface protection of stone slabs (such as marble and granite). It typically consists of a drying section, a gluing section, a curing section, a curing section, and an automatic conveyor. By filling the stone surface or cracks with epoxy or polyester resin and then curing it through heat, the system improves the stone's structural strength, color stability, and impermeability. The upstream supply chain primarily involves the supply of raw materials and accessories such as epoxy resin, curing agent, UV light source, and transmission system. The downstream market primarily serves marble processing plants, building stone companies, and high-end decorative engineering companies. Pedrini, a leading manufacturer in this field, boasts an annual production capacity of approximately 130?160 units, exporting extensively to Europe, Asia, and the Middle East.

The global Cyclic Resin Line market size was estimated at USD 218.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Cyclic Resin Line market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging
