Abstracts

The cyclic triaxial test system is a specialized assembly of equipment designed for conducting cyclic triaxial tests. It is capable of applying axial cyclic loads to test specimens under simulated conditions that mimic the actual cyclic loads experienced by geomaterials or other materials, while maintaining a constant confining pressure (lateral pressure). This system precisely measures changes in parameters such as stress, strain, and pore water pressure within the test specimens during the cyclic loading process. By doing so, it allows for the investigation of the mechanical properties of materials under repeated loading conditions.

The global Cyclic Triaxial Test Systems market size was estimated at USD 351.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
