Abstracts

Cyclin-Dependent Kinase (CDK) Inhibitors are a class of molecules that interfere with the activity of cyclin-dependent kinases, a group of enzymes that play a critical role in regulating the cell cycle. The cell cycle is a series of events that cells go through as they grow and divide. CDKs, along with their regulatory proteins called cyclins, control the progression of the cell cycle by phosphorylating specific target proteins. CDK inhibitors were initially developed and approved for specific types of breast cancer. Development trends involve exploring their efficacy in other cancer types. Clinical trials and research studies are investigating the use of CDK inhibitors in various malignancies, including lung cancer, ovarian cancer, and hematological malignancies.

The global Cyclin-Dependent Kinase (CDK) Inhibitors market size was estimated at USD 8106.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.40% during the forecast period.
