Report Overview

Cyclo Olefin Copolymer (COC) is a high-performance thermoplastic material that is derived from the copolymerization of cycloolefins and ethylene. It is known for its excellent optical clarity, chemical resistance, and heat resistance, making it suitable for a wide range of applications. COC exhibits low water absorption, high impact strength, and excellent dimensional stability, which contribute to its use in medical devices, optical components, and packaging materials. The material's properties, such as high transparency, low birefringence, and resistance to gamma sterilization, also make it an ideal choice for pharmaceutical packaging and diagnostic equipment.
