## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cycloaliphatic Isocyanate Prepolymers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of Cycloaliphatic isocyanate prepolymers reached approximately 310 kilotons, with an average global market price of around USD 3800 per ton. Cycloaliphatic isocyanate prepolymers are a class of urethane-based materials formed by the reaction of cycloaliphatic diisocyanates (such as isophorone diisocyanate or hydrogenated MDI) with polyols, resulting in prepolymers that retain unreacted isocyanate groups. Unlike aromatic isocyanate prepolymers, these compounds exhibit superior UV resistance, color stability, and weathering properties due to their aliphatic ring structure without conjugated double bonds. They are widely used in high-performance polyurethane systems including coatings, adhesives, sealants, and elastomers (CASE applications), especially for outdoor and light-exposed applications where long-term durability and non-yellowing characteristics are critical.

The global Cycloaliphatic Isocyanate Prepolymers market size was estimated at USD 1183.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
