Abstracts

Cyclohexylthiophthalimide, a chemical compound primarily functioning as a peptizing agent and scorch retarder in the rubber industry, exists as a critical specialty additive used to control the vulcanization process during the manufacturing of synthetic and natural rubber products. It operates by delaying premature cross-linking (scorching) while improving plasticity and dispersion of fillers, thereby enhancing processing safety, efficiency, and the final physical properties of rubber goods such as tires, hoses, belts, and seals. Its molecular structure comprising a phthalimide group substituted with a cyclohexylthio moiety imparts specific reactivity and solubility characteristics suited for high-temperature rubber processing applications, positioning it as a niche but indispensable component in advanced rubber compounding formulations.

The global Cyclohexylthiophthalimide market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
