Abstracts

Cycloolefin microplates are specialized laboratory consumables manufactured from cycloolefin polymers (COP) or cycloolefin copolymers (COC), which are amorphous thermoplastics known for their high optical clarity, low autofluorescence, excellent chemical resistance, minimal water absorption, and superior dimensional stability. These properties make them particularly suitable for high-precision applications in life sciences, pharmaceutical research, and diagnostics, where they are used in assays such as fluorescence detection, UV spectroscopy, PCR, cell culture, and high-throughput screening. Their inert nature and low binding characteristics reduce sample loss and interference, while their thermal stability allows for use in temperature-sensitive processes, positioning them as a premium alternative to traditional polystyrene or polypropylene microplates in demanding experimental settings.

The global Cycloolefin Microplates market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
