Abstracts

Cyclopentadiene is an organic compound falls under the class of cyclo alkenes that can be further classified under unsaturated hydrocarbons. The chemical IUPAC name of Cyclopentadiene is 1,3 cyclopentadiene. At room temperatures, the cyclopentadiene dimerizes to form a dicyclopentadiene with the help of Diels-Alder Reaction. The compound commercially available in the liquid state and has colorless appearance and unpleasant odor. Cyclopentadiene can be prepared from the steam cracking of naphtha and can also be produced from coal tar. Cyclopentadiene monomer can be synthesized when the commercially available dicyclopentadiene is thermally cracked at 180 degree C and can be further used for producing chemical adopted in wide scale in different application industries. The liquid compound is primarily used for the synthesis of cyclopentene and its derivatives ethylidenenorbornene. These produced species are then further used in the production of speciality polymers. Also the compound is one of the main constituent in the fabrication of cyclopentadienyl ligand one of the highly stable compound in organometallic chemistry. The highest production and consumption of the Cyclopentadiene compound is noted in the United States. Western Europe and Japan are making significant contribution in fabrication and utilization of the compound worldwide. China has been witnessing the exceptional demand for cyclopentadiene derivatives during past few years. Several new market entrants emerged in the manufacturing of cyclopentadiene globally which impacted the market of the organic compound significantly. Cyclopentadiene is used extensively in manufacturing of automotive accessories and parts, and is also used in manufacturing of sporting, plastic and gardening goods because of its high stability, toughness, and high thermal resistance and ease in processing. The Global key players of Cyclopentadiene include LyondellBasell Industries, Cymetech, Sinopec Group, etc. The top three players hold a share about 22%.
