Report Overview

Cyclopentane (CAS 287-92-3) is a highly volatile, colorless hydrocarbon with the molecular formula C_5H_{10} , belonging to the cycloalkane family. It is primarily used as a blowing agent in the production of polyurethane and polystyrene foams, particularly in refrigeration and insulation applications, due to its low global warming potential (GWP) and ozone-friendly properties, making it a preferred alternative to traditional chlorofluorocarbons (CFCs) and hydrochlorofluorocarbons (HCFCs). Additionally, it serves as a solvent in chemical synthesis and finds niche applications in fuel blending and laboratory research. The market for cyclopentane is driven by stringent environmental regulations promoting sustainable refrigerants and insulation materials, particularly in regions like Europe and North America with strict emission standards. However, challenges such as flammability risks and competition from other eco-friendly blowing agents like hydrofluoroolefins (HFOs) could impact growth. The expanding construction and automotive industries, particularly in emerging economies, are expected to further boost demand for cyclopentane-based insulation materials. Key players focus on production optimization and strategic partnerships to meet rising demand while adhering to environmental compliance.

The global Cyclopentane (CAS 287-92-3) market size was estimated at USD 230.41 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
