Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Cyclopentane competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Cyclopentane is a highly flammable alicyclic hydrocarbon with chemical formula C_5H_{10} , consisting of a ring of five carbon atoms each bonded with two hydrogen atoms above and below the plane. It occurs as a colorless liquid with a petrol-like odor. Its melting point is $-94\text{ }^{\circ}C$ and its boiling point is $49\text{ }^{\circ}C$. The global cyclopentane market has been experiencing steady growth, driven primarily by its increasing use as a blowing agent in the production of polyurethane foams for refrigeration and construction applications. As regulatory pressures to phase out environmentally harmful substances like hydrofluorocarbons (HFCs) intensify, cyclopentane is being a more eco-friendly alternative with low global warming potential (GWP) and zero ozone depletion potential (ODP) has gained significant traction. Key industries such as appliance manufacturing, insulation, and automotive are major consumers, with growing demand in emerging economies like China, India, and Brazil further boosting the market. However, the market also faces challenges such as the flammability of cyclopentane, which requires stringent handling and storage protocols, increasing costs for manufacturers. Despite these hurdles, ongoing technological advancements aimed at improving safety and expanding application areas are expected to create new growth opportunities. Europe, North America, and Asia-Pacific dominate the regional market landscape, with Asia-Pacific projected to witness the fastest growth rate due to rapid industrialization, rising disposable incomes, and infrastructure development activities.

The global Cyclopentane market size was estimated at USD 309.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the

forecast period.
