Abstracts

Cyclopentasiloxane is an organosilicon compound with the formula $[(CH_3)_2SiO]_5$. It is a colorless and odorless liquid that is slightly volatile. The compound is classified as a cyclomethicone. Such fluids are commonly used in cosmetics, such as deodorants, sunblocks, hair sprays and skin care products. It is becoming more common in hair conditioners, as it makes the hair easier to brush without breakage. It is also used as part of silicone based personal lubricants. D5 is an odorless, high-boiling liquid which is very poorly soluble in water and moderately volatile. The substance is not classified for physical hazards under the Globally Harmonized System (GHS). D5 creates many of the positive qualities we associate with personal care products. For example, it acts as a vehicle that enables efficient and easy spreading of the protective ingredients in sunscreens and other skin care products. In addition, D5 has unique properties that improve the quality, reliability and functionality of many different kinds of consumer products.

The global Cyclopentasiloxane market size was estimated at USD 72.8 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
