Abstracts

Cyclophosphamide Injection is a chemotherapeutic alkylating agent widely used in the treatment of various cancers, including lymphomas, leukemias, multiple myeloma, and certain solid tumors, as well as in immunosuppressive regimens for autoimmune disorders and organ transplantation. It functions by interfering with DNA replication and cell division, thereby inhibiting the proliferation of rapidly dividing cells, particularly malignant ones. Available in both branded and generic formulations, the product is administered intravenously in clinical settings under strict medical supervision due to its potent cytotoxic effects and associated risks, such as bone marrow suppression, hemorrhagic cystitis, and increased susceptibility to infections.

The global Cyclophosphamide Injection market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
