Report Overview:

The cylindrical lithium battery winding machine is used for the production of cylindrical lithium-ion battery cells and is one of the main equipment for battery production. The working process is: after the positive and negative pole pieces and diaphragm made by the film making mechanism are loaded into the feeding mechanism, they are respectively sent to the winding part for winding under the guidance of the pole piece feeding mechanism through tension control, dust removal, process correction, quality monitoring, etc. After the winding and fabrication, the electric core is taken down from the winding needle by the manipulator for hole ironing. After the hole ironing is completed, it is taken down by the manipulator and put into the conveyor belt and sent to the collection platform, and the unqualified products are removed during the fabrication.

The Global Cylinder Battery Winding Machine Market Size was estimated at USD 161.31 million in 2023 and is projected to reach USD 218.66 million by 2029, exhibiting a CAGR of 5.20% during the forecast period.
